About me

A UI & UX designer six months into my first professional role, translating existing product concepts with backend logic into user flows and high-fidelity screens for SaaS products at Pegorion Software Solutions. I focus on turning complex, multi-role workflows into interfaces people can actually use without friction. Most recently, I independently redesigned the company website, with feedback from the Product Manager and internal stakeholders crediting it with helping build client trust.

EXPERIENCE

UI & UX Design Intern

Pegorion Software Solutions

Jan 2026 — Jul 2026 · Built SaaS product experiences and led a marketing website overhaul for Pegorion Software Solutions.

1. AssessFlow

A role-based recruitment assessment platform for scaling exam management, with a secure, distraction-free testing experience for candidates.

- Built the **end-to-end exam monitoring experience** for the Admin portal, including a centralized Data Management module that eliminated duplicate/inconsistent company and student records
- Designed the **token generation and company approval flows** for the Admin team
- Reworked the **recruiter dashboard** around the recruitment lifecycle instead of isolated quick actions, in collaboration with the Team Lead
- Of two competing directions explored by a 2-person design team, **the Product Manager selected mine** as the foundation for the final product

2. Employee Management System

A unified workforce management platform centralizing HR, payroll, attendance, communication, performance, compliance, and learning — replacing multiple disconnected tools.

- Led the **end-to-end UX** for a role-based Employee Management System spanning **Admin, HR, Manager, and Employee portals**, translating research across four user roles into a scalable information and permissions architecture
- Transformed payroll operations from a single cluttered interface into independent, **single-responsibility modules with a guided 6-step workflow** and pre-approval review checkpoints, reducing complexity for HR teams at enterprise scale
- Partnered with the **product team** on the Learning Management System module
- Reimagined project and task management as one connected workflow spanning planning through delivery, **cutting context-switching** and surfacing role-relevant information at each stage
- Built and maintained a reusable component system to keep the interface consistent as scope grew

3. Website Redesign

A marketing website rebuilt to clearly communicate Pegorion's products and services, replacing a site that no longer reflected the company's growth

- Independently led the **end-to-end overhaul** of the company website — Home, Services, and Projects pages — now live in production
- Restructured the site's **information architecture based on research** showing visitors couldn't easily find what Pegorion does or offers, reordering the sitemap to lead with services and products over company-first messaging
- Built two **new digital experiences** that didn't previously exist: a Careers page to support intern recruitment and a BPO Services section for the company's expanding offerings
- Credited by the **Product Manager and internal stakeholders** with helping build client trust

EDUCATION

B.Tech, Computer Science Engineering (AI & ML)

Chaitanya Bharathi Institute of Technology

Proddatur, Andhra Pradesh · Oct 2022 – Jun 2026 · CGPA 8.80

SKILLS

DESIGN

UX Strategy, User Flows, Journey Mapping, Wireframes, Prototypes, Testing, Design Systems
